

Indicator metadata: Untapped potentials in trust

Untapped potentials in CE in trust among individuals (Percentage of people answering they trust others "A lot" or "Enough" to the European Values Study). The quantification of the untapped potentials in the CE area was run through the following two main regression models:

$$\Delta Y = \alpha + \sum \beta_k * control_k + \gamma * border + \delta_i * assets_i + \theta_i * border * assets_i + \mu_{ij} * border * assets_i * inst_barrier + \sum \rho_c * country_c = 1..n + \epsilon_{ij}$$

where ΔY is the 2008-2018 regional growth rate, i refers to assets, $inst_barrier$ to whether the region suffers from institutional and legal barriers more than the average, and c to countries. δ_i measures the impact of each regional growth asset i on regional growth, θ_i measures specifically the impact of asset i on the growth of international border regions with respect to all other regions, and μ_{ij} measures the impact of assets i on the growth of border regions characterized by legal and administrative barriers j , with respects to all other regions.

Theme(s): Economy, finance and trade - Economy, Finance and Trade
